

# TIT.Network - White Paper

---

## A New Crowdfunding Mechanism – The “Pre-Order Token Offering”

TIT will raise funds via new fund-raising mechanism called a “Pre-Order Token Offering” (POTO), in which investors “pre-order” by buying a utility token now, and then later exchanging it for a completely separate utility token, and developers raise funds by charging a fee for selling the original utility token:

- a. The “PRE” Pre-order Utility Token:
  - i. Is sold for 1 TRX plus fee
  - ii. Earns SR rewards on a 1:1 basis with TRX, paid on a weekly basis,
  - iii. The TIT Foundation will offer to buyback any PRE for TRX at a 1:1 ratio until the exchange period begins, giving PRE a 1:1 backing with TRX, and
  - iv. The TIT Foundation gives PRE holders the right to access its services, and
  - v. The TIT Foundation, at its sole discretion, will offer to buy PRE tokens for TIT tokens when the exchange period begins, for a price of 10 TIT for each PRE.
  - vi. PRE does not guarantee the right to the future work/profit of the TIT Foundation
  - vii. PRE does not constitute equity in the TIT Foundation
- b. The fee:
  - i. There is a token sale fee of 35%,
  - ii. The fee is tied to no obligations,
  - iii. The fee gives zero equity stake in the TIT Foundation; and
  - iv. The TIT Foundation can use the fee at their sole discretion, including but not limited to marketing and development of TIT Foundation projects.
- c. If the TIT Foundation determines it needs more money after the first PRE token sale to fund its operations, it has the option to use the fees earned to market a 2nd PRE token sale

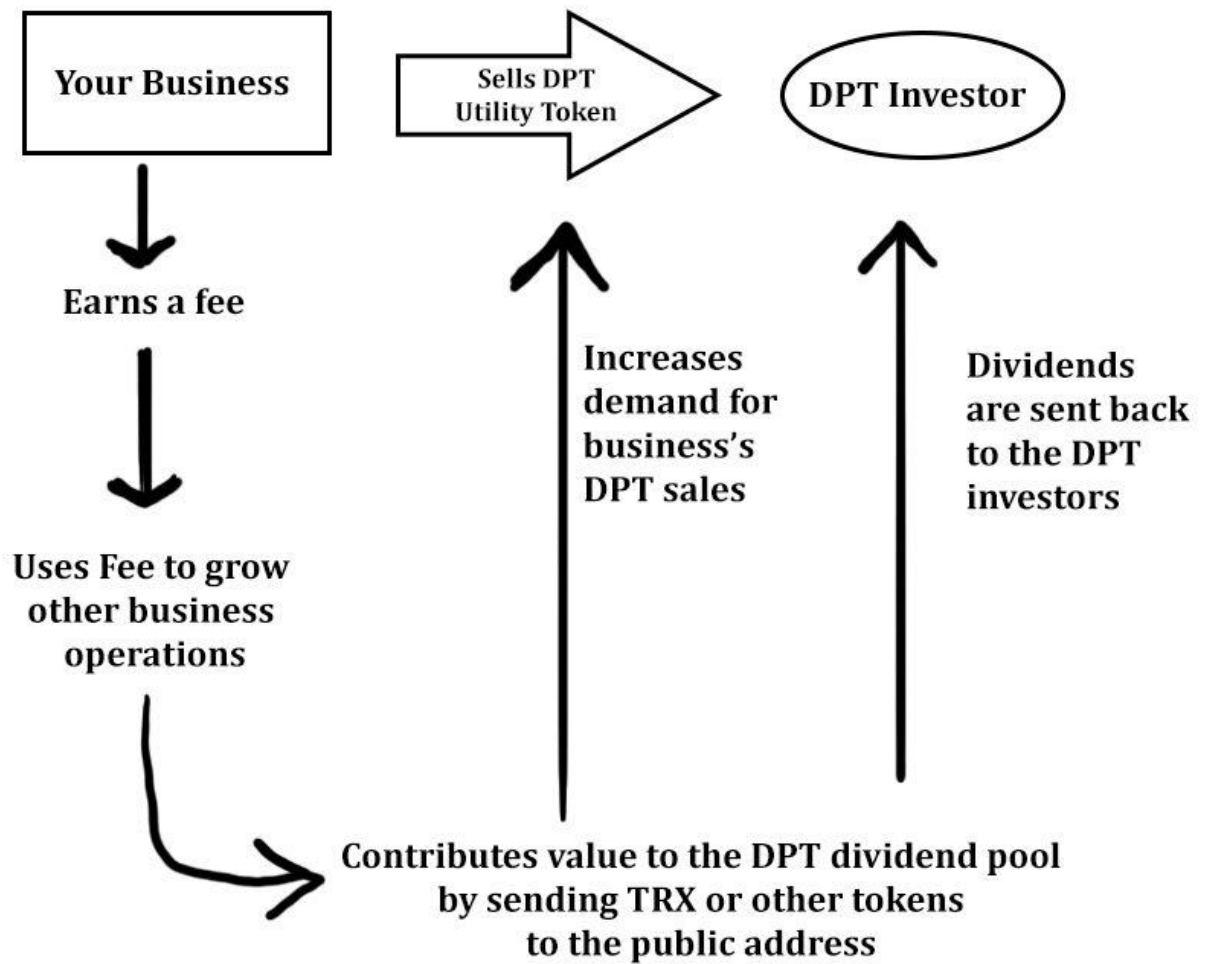

## A New Type of Utility Token - The “Dividend Pool Token” (DPT)

A central company or smart contract can sell a utility sub-token on the decentralized TIT Network that has a built in dividend pool that anyone can contribute to and receive a TIT rebate, including the central company or smart contract.

This can increase the demand for the sub-token that only the central company or smart contract can issue. This means the company or smart contract can earn more from fees for sub-token sales and growth than it contributes to the dividend pool over time.

This model incentivizes the central company or smart contract to voluntarily contribute profits from its operations into that dividend pool, because the more TRX it contributes to the dividend pool, the higher the demand for its specific sub-token sales will be, and the more TITs it will earn.

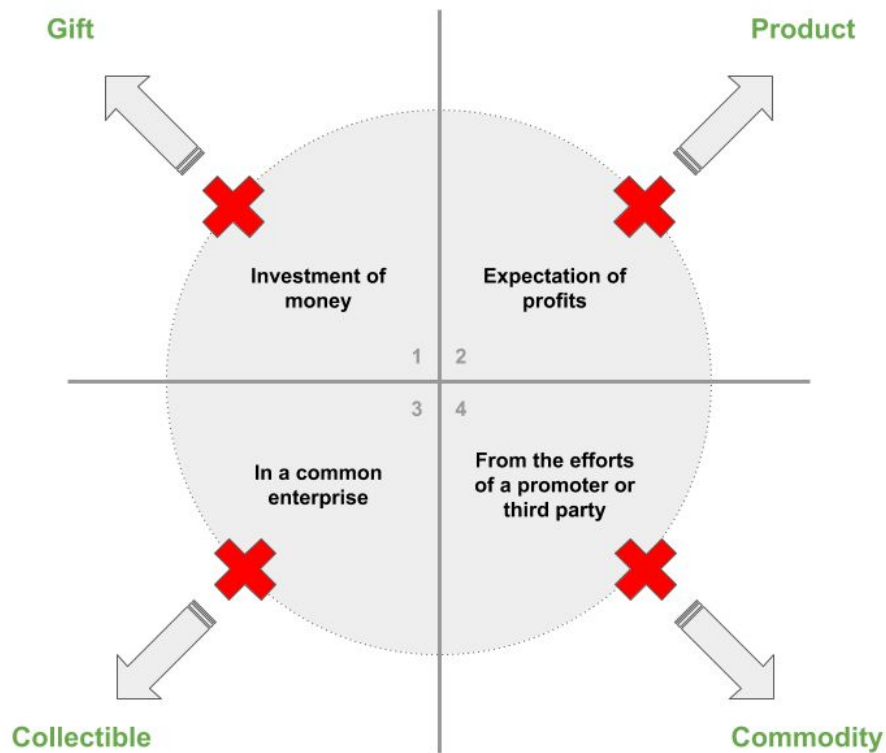

## The Howey Test

The Howey Test is the benchmark the US Securities and Exchange Commission (SEC) uses to determine if a financial instrument is a security or not. There are 4 prongs to the Howey Test, and ALL FOUR must be met to be a security.

1. An investment of money
2. With an expectation of profits
3. In a common business or enterprise
4. From the efforts of a third party

## The “Howey Test” for an “Investment Contract”

Because the company is selling a utility token, owning the token is NOT an investment in a common business or enterprise, and because all contributions to the dividend pool are voluntary and anyone can contribute, there is NO expectation of profits from the efforts of a specific third party or promoter. **Therefore, Dividend Pool Tokens are NOT securities, they are utility tokens.**

Because the developer is selling a utility token that earns interest from SR rewards and is pinned 1:1 to TRX, owning the token is NOT an investment in a common business or enterprise, and because there is NO expectation for the developer or anyone else to swap the utility token for a new token, there is NO expectation of profit from the efforts of a third party or promoter. **Therefore, Pre-Order Token Offers are NOT securities, they are utility tokens.**

# The Ultimate Dividend Network - TIT

The TIT Foundation may choose to use the fees to build the Ultimate Dividend Platform on the TIT Network, which could eventually include all of the following elements:

## Gaming and Social Media

The TIT Foundation may choose to use the fee to build a smart contract gaming platform that:

- a. Mints new TIT tokens and sub-tokens for players;
- b. generates income in TRX and other tokens for stakers;
- c. pays interest in TIT to stakers; and
- d. Offers unique DeFi products to users

Games may include:

- a. Gambling games based on a fair RNG, with competitive house edge
- b. Slots, Poker, Board games, LIVE Casino tables
- c. MMORPGs, First person shooters, social games, and other video games that can generate micro-transactions
- d. Open development so independent developers can add sub-platforms and games
- e. A social platform where users are rewarded with extra tokens for partying up and playing games with their friends or strangers
- f. A lottery

## A New Model for Crowdfunding Businesses on TIT (POTOs)

Trusted community members can use this crowdfunding method to raise funds for creative projects that they manage semi-centrally with a company, or completely decentrally with a smart contract, and which give benefits to crowdfunders by adding value to the TIT network:

- a. Raise funds using the new “Pre-order Token Offer” or the “Dividend Pool Token” utility token models (So the tokens are not securities)
- b. Fees go to private “Company” or smart contract that is passively or actively managed by the community or the TIT Foundation
- c. Sub-tokens can be backed 1:1 with TRX (or a different TRON Network token), giving long TRX exposure to sub-token holders

- d. "Company" or smart contract voluntarily passes some of their earnings back into the sub-token dividend pool
- e. Sub-token dividend pool smart contracts feed some of their dividends into the TIT dividend pool to earn TIT that is permanently frozen for rewards or distributed directly to sub-token holders
- f. Sub-token holders may earn extra SR Rewards from the 1:1 TRX backing and the TRX in the dividend pool
- g. "Company" or smart contract developer may earn a fee for their services
- h. For examples see the "Dapp Index Fund Sub-Token" and "Token Carrier Sub-Token"

## **Dapp Index Fund Sub-Token (DIF)**

TRX holders can choose to buy the DIF sub-token at a 1:1 rate to increase the dividends they'd receive over investing in a normal TRON SR:

- a. DIF tokens are redeemable 1:1 with TRX, so have the same long exposure as holding TRX
- b. There's a 40% fee paid to the TIT Foundation for creating new DIF tokens
- c. DIF must be frozen for minimum 1 year to start earning dividends immediately
- d. There are penalties for early unfreezing
- e. The DIF dividend pool will receive SR rewards for voting for the TIT-SR, at a 1:1 TRX to DIF ratio or higher
- f. The TIT Foundation can use the 40% fee at their sole discretion to setup a privately owned and managed "Dapp Index Fund" that buys/mines and freezes WIN, BFG, DICE, LIVE, 888, CITY, TIT and other TRX income producing dapps
- g. The sub-token sale continues indefinitely so the Company is always incentivized to keep contributing to the dividend pool so they can continue earning fees for selling HFT sub-tokens
- h. The TIT Foundation may choose to pass 70% of the TRX income from the Dapp Index Fund into the DIF dividend pool
- i. The TIT Foundation may choose to reinvest 10% of the income into the index fund
- j. The TIT Foundation may choose to pass 10% of the income into the TIT Dividend pool
- k. The TIT Foundation may choose to keep 10% of the income as a fee for managing the fund
- l. 25% of the DIF dividend pool is dispersed on a weekly basis to keep the dividend pool large
- m. 75-100% of the dividend pool will be frozen for extra SR rewards, unfreezing 25% right before each dividends payout
- n. The Index fund will grow continuously in dapp token amount because
  - i. 0% of the dapp tokens will ever be sold to pay out DIF holders,
  - ii. 10% of the dividends get reinvested into the fund continuously,
  - iii. The 40% fee from all new DIF token sales gets added to the fund, and
  - iv. When DIF is burned it sends the corresponding TRX into the index fund, reducing the supply of DIF and increasing the fund size
  - v. This model rewards long-term DIF holders and penalizes people who try to sell their DIF

## Insurance Carrier Sub-Token (ICT)

Additional dividends can be earned by setting up an insurance carrier that passes excess commissions into a sub-token dividend pool

- a. Token Sale:
  - i. A Company raises funds by doing a POTO and selling ICT sub-tokens 1:1 for TRX
  - ii. ICT tokens are backed 1:1 by TRX
  - iii. The Company charges a 50% fee for the sub-token sale
  - iv. The Company uses the earnings from the token sale fees to fund its operations
  - v. The fee and the ICT sub-token does not guarantee any future work from the Company or represent equity in the company.
  - vi. The Company uses the 1:1 TRX backing to generate SR rewards for the ICT dividend pool
  - vii. The Company may offer the right to services in exchange for ICT tokens at its discretion
  - viii. The sub-token sale continues indefinitely so the Company is always incentivized to keep contributing to the dividend pool so they can continue earning fees for selling ICT sub-tokens
- b. The Company gets all the licenses required to be an insurance carrier
- c. The Company hires insurance agents and finds clients to sell insurance too
- d. Excess commissions are distributed in the following way:
  - i. 50% of the commissions are passed on to the ICT sub-token dividend pool
  - ii. 20% of the commissions are passed on to the TIT dividend pool
  - iii. 30% of the commissions are kept by the company to spend on operations

## Hedge Fund Sub-Token (HFT)

Additional dividends can be earned by setting up a hedge fund that trades cryptocurrencies and tokens using a proprietary system, privately managed by the TIT Foundation.

- a. Token Sale:
  - i. A Company raises funds by doing a POTO and selling HFT sub-tokens 1:1 for TRX
  - ii. HFT tokens are backed 1:1 by TRX
  - iii. The Company charges a 35% fee for the sub-token sale
  - iv. The company uses the earnings from the token sale fees to fund its operations
  - v. The fee and the HFT sub-token does not guarantee any future work from the Company or represent equity in the company.
  - vi. The company uses the 1:1 TRX backing to generate SR rewards for HFT dividend pool
  - vii. The company may offer the right to services in exchange for HFT tokens at its discretion
  - viii. The sub-token sale continues indefinitely so the Company is always incentivized to keep contributing to the dividend pool so they can continue earning fees for selling HFT tokens
- b. The Company will use Intuit Trading's proprietary trading method to trade cryptocurrency and traditional markets on spot, futures, and options contracts.

- c. The company will pass 40% of net profits back to the HFT dividend pool, and 20% of net profits to the TIT dividend pool, reinvest 15% of net profits back into the fund, and keep 25% of net profits as a fee

## **Community Sub-Tokens**

Trusted community members can use the TIT Network to launch their own crowdfunded businesses and smart contracts. By doing a Pre-Order Token Offering, they avoid violating securities laws and messy regulations that come with selling equity to investors, and are free to use the money they raise in the POTO on developing businesses and smart contracts that add value to the TIT Network and its sub-tokens.

## **Advertising and Referral Revenue**

The TIT Foundation may choose to place ads and outside referral links on its website to generate extra revenue, at its sole discretion.

- a. 50% of this revenue will be passed on to the TIT dividend pool
- b. 50% of this revenue will be kept by the TIT Foundation and used at their sole discretion, including for development and marketing

## **Exchange Revenue**

The TIT Foundation may offer ways for users to buy TRX directly from the TIT Foundation

- a. The TIT Foundation can offer credit/debit card conversions
- b. The TIT Foundation will charge a 5% fee + card processing fees for these transactions
- c. The TIT Foundation will send 50% of its net profits from these operations back into the TIT dividend pool at their sole discretion

# **Initial Token Sales of TIT**

## **Exchanging PRE for TIT**

The TIT Foundation may at some point offer to sell TIT for PRE at a 10:1 ratio.

- a. All the TRX in the PRE-SR will get sent to the TIT dividend pool
  - a. This means the TIT dividend pool will automatically be as large as the entire PRE supply,
  - b. eg. if 10,000,000 PRE are issued, TIT dividend pool is 10,000,000 TRX on day one

- b. This means PRE holders eventually get all their TRX back after exchanging PRE for TIT, minus fees and dilution (REBATE)
- c. There is no fee for exchanging

## **Buying TIT with TRX**

The TIT Foundation will sell TIT tokens for TRX at a 9:1 ratio

- a. The TRX tokens earned from the token sale will be sent to the dividend pool and slowly returned to TIT stakers. (REBATE)
  - a. eg. if 90,000,000 TIT is sold, 10,000,000 TRX will be sent to the dividend pool the first day after the token sale ends
- b. A 50% fee will be charged by the TIT Foundation for the sales.
- c. The TIT Foundation has the freedom to use the fee to fund its private operations including but not limited to development and marketing of TIT Foundation projects.

## **A Better Type of Staking**

### **“Certificate of Deposit” Smart Contract**

TIT holders can buy “Certificates of Deposits” (CDs) from the smart contract, which:

- a. lock their tokens for 1-9 years, and
- b. pay dividends and interest based on:
  - share price,
  - length of time locked,
  - amount locked, and
  - Income generated, and
- c. Have penalties for unfreezing early.

### **“Retirement Account” Smart Contract**

TIT holders can buy “Retirement Accounts” (RAs) which:

- a. get the same benefits as CDs, but
  - a. lock for 10-20 years, and
  - b. at the end of the period pay a 100-300% interest bonus, and
- b. Have extra penalties for unfreezing early

## **“Permanent Freeze” Smart Contract**

TIT holders may choose to PERMANENTLY FREEZE their TITs, effectively removing them from the circulating supply!

- a. This provides the same interest and bonuses as a retirement account
- b. Every 20 years the inflation rate resets but restarts 10% higher than the previous 20 years
- c. This can be used by sub-token pools that automatically receive TITs and want to earn dividends and interest indefinitely
- d. Permanently frozen tokens cannot be unfrozen

## **Penalties**

There are penalties for unfreezing CDs, RAs, and sub-tokens early:

- a. Emergency Melt takes 48 hours and is a 60% penalty of all interest earned
- b. Slow Melt takes 3 weeks and is a 15% penalty of all interest earned
- c. Retirement accounts have an additional 15% penalty for early unfreezing
- d. If you withdrew your interest the penalties can hit your principle
- e. Penalties are always paid in TIT or sub-token
- f. TIT Penalties are burned
- g. Sub-token penalties are burnt and the underlying token is sent to the pool or fund

## **Interest**

Interest is always paid in freshly minted TIT or sub-tokens, depending on which is being staked

- a. The longer you stake the more interest you make
- b. Each year your coins are frozen earns 5% more than the previous year, up to 20 years
- c. 1 year CD earns 10% APR
- d. 20 year RA earns 10% APR 1st year up to 105% APR on the 20th year, plus RA bonuses
- e. 5% penalty is taken for withdrawing your interest before the CD or RA expires
- f. The penalty is burned
- g. 5% bonus is added to interest earned if you compound it before the CD or RA expires

## Dividends Pool

Dividends will be pooled in a smart contract and paid to TIT stakers based on the percentage of shares they hold.

- a. Only 1% of the TIT Dividend pool is paid out every 12 hours to keep the payments more consistent and the dividend pool large, which generates larger SR rewards
- b. All sub-token pools feed into the TIT token dividend pool
- c. The dividend pool will go up or down in TRX based on how much the platform or sub-platform earns or loses during any particular time period
- d. Dividends are paid in TRX and other TRON network tokens that are added to the platform
- e. Up to 90% of dividends will be frozen to vote for the TIT-SR,
  - a. Freezing increases security,
  - b. SR rewards will be passed into the dividend pool, and
  - c. TRX will be unfrozen as needed to payout dividends and winners

## Supply Unfreezing Chart

Network observers can see a chart that shows when TIT or sub-token supply is unfreezing; this allows them to know when any supply shocks are about to happen beforehand.

## TIT Initial Distribution

This is how the TIT Tokens will be distributed after the initial token sale

- 35% for Initial token sale and pre-order sale
- 25% goes to the TIT Foundation
- 5% goes to token sale referrers
- 15% goes to partnerships
- 20% goes to marketing and promotions
- (SUBJECT TO CHANGE)

The TIT Foundation will avoid selling TIT tokens to fund operations after the initial token sales and will instead use initial token sale fees, sub-token sale fees, and operating income as their primary source of funding. The TIT Foundation will lock all of its initial TITs in CDs or RAs

## Initial TIT Supply

The initial supply will be determined by the demand from the market at the offered prices. For example:

- IF the TIT Foundation sells 100,000,000 TIT in the PRE to TIT sale, and
- 900,000,000 TIT in the token sale, then
- 50,000,000 TIT goes to Referrers,
- 262,500,000 TIT goes to the TIT Foundation reserve,
- 157,500,000 TIT goes to the reserve for Partnerships, and
- 210,000,000 TIT goes to the reserve for Marketing and Promotions
- Total supply would be 1,680,000,000 TIT on Day One
- The market cap of TIT would be 151,200,000 TRX at a price of 9 TIT per TRX
- (FINAL NUMBERS WILL BE DETERMINED BY MARKET DEMAND)

## TIT Inflation

TITs will inflate forever! This Keynesian economic model is actually good for long-term TIT stakers because most of the inflation goes directly into their wallets, meaning staker's TIT bags are almost always inflating at a similar rate as the token supply inflation rate, or sometimes much faster!

Endless inflation allows people to continue earning TITs indefinitely by playing games, contributing TRX to the dividend pools, and long-term staking their TITs! This Keynesian model also incentivizes the most productive members of the network to build businesses and smart contracts that contribute to the network, and it incentivizes players to play lots of games!

Very long-term stakers TIT bags will inflate faster than the average rate of inflation, giving them a larger share of the dividends!

The only TIT that gets effectively diluted by inflation is the TIT that is not locked up in CDs and RAs and is instead being traded on the market. This strongly incentivizes people to freeze and stake their TIT for very long periods of time, rather than trying to trade it, which reduces the circulating supply.

Regular buybacks and token burns will also help reduce the circulating supply and help support the price.

- There will be only 3 ways to mint new TIT
  1. Play games on the TIT platform and spend TRX
  2. Stake your TITs in a CD or RA
  3. Contribute TRX to the TIT dividend pool
- Players earn more than stakers because they are spending TRX on the platform
- The actual inflation rate will depend on several factors including:
  1. Number of TIT being staked

2. Length of time TIT is being staked for
3. Number of players mining TIT with TRX
4. Mining Rate
5. Rebate Rate for contributions
6. Amount of contributions made to the TIT Dividend pool

## TIT Contributions and Rebates

- Voluntary contributions to the TIT Dividend pool made by businesses and individuals will mint new TIT
  1. This incentivizes contributions to the TIT dividend pool by TIT Network sub-tokens
  2. This allows for people to easily mint new TIT whenever they want without having to take the risk of not knowing what their luck will be
  3. For every TRX contributed to the TIT dividend pool, the contributing address will automatically receive a 1 TIT rebate
  4. Everytime a unique address contributes 100,000 TRX to the dividend pool, it's rebate rate permanently increases by 1 TIT
  5. The rebate rate increases by 1% every month to keep up with TIT inflation and keep the rebate rate attractive

## TIT Mining

Players can mine TIT by playing games and spending TRX on the TIT Platform. This makes playing games and spending TRX much more attractive to users because the TIT can be frozen and you can potentially earn back all the money you spent from dividends and interest, plus a lifetime profit.

- The initial mining rate will be 1 TRX played for 1 TIT mined
- The mining rate will increase by 1% every month to keep up with TIT inflation and keep playing on TIT gaming attractive
- Everytime a unique address loses 100,000 TRX, it's mining rate permanently increases by 1 TIT

## TIT Burning

Token burning reduces the total supply of the coins and disincentivizes people from unfreezing their tokens early.

1. Players can play games and access services with TIT and sub-tokens
2. Platform earnings in TIT and sub-tokens are burned.
3. The TIT Foundation may choose to use up to 5% of the TIT dividend pool to buy back and burn TIT from the secondary markets on a monthly basis.
4. TIT and sub-tokens are burned when users are penalized for early unfreezing.

5. People who PERMANENT FREEZE their TITs are removing them from the circulating supply, effectively burning them.

## TRON Super Representative for TIT

The TIT Foundation will run the TIT-SR which will return all SR Rewards back to the TIT platform

- a. A smart contract will freeze or unfreeze TRX as needed so there is always enough unfrozen to pay out daily dividends and winners.
- b. Increases security because frozen tokens can only be moved after waiting for the unfreezing period to end
- c. The TIT Dividend pool, the sub-token 1:1 TRX Backing, and the sub-token dividend pools, and the TIT Foundation will all be voting for the TIT-SR
- d. Any new sub-tokens can choose to vote for the TIT-SR and have the SR rewards passed back to the sub-token's dividend pool

## Referral Mechanisms

New TIT tokens are minted for referring new users:

1. Different levels of referrer
2. Referred Players earn 10% more TIT
3. Referrers get a bonus 10% TIT based on how much TIT their referred players mine or contribute
4. Referral bonus can go up to 20% for people who refer 1,000 new players
5. Token sale referrers get to split 5% of the initial supply of TIT when the final token sale ends, shares are based on how much TRX volume their referrals bring in

## Positive Feedback Loops

The system is designed to create a number of positive feedback loops, because TIT holders are penalized for withdrawing, and rewarded very handsomely for staking, there is very large incentive to stake long-term, especially because the longer you stake the more you make. This reduces the supply available to be sold on exchanges, which helps support the price, especially during periods where demand for high yield, cash flowing crypto assets increases.

For example, BTC miners have a strong incentive to sell their Bitcoin to cover operating costs of running a mining operation; this puts large sell pressure on the BTC price.

On the contrary, TIT stakers are strongly incentivized to compound interest and dividends, because it means they are going to get much larger payouts in the future. This reduces sell pressure because people can't trade frozen tokens, and it creates buy pressure from people who want to earn yield.

TIT holders are also PENALIZED for trying to end the stake early or withdraw their interest early, which disincentivizes them from selling TIT and reduces sell pressure. The TIT is also BURNED for penalties, which reduces total supply and the amount the unfreezers can sell.

Players on the platform are incentivized to keep playing games and spending TRX, because the more games they play and the more TRX they spend, the more TIT and sub-tokens they mine. The TIT, while being valuable in itself, also produces dividends and interest that could likely see a return on investment relatively quickly and produce lifetime profit.

Players and holders are also incentivized to compound interest because of the large yield and bonuses paid, locking up more and more of the supply over time.

The TIT Foundation may also use 5% of the dividends pool to buy back and BURN TIT from the second market, causing more buy pressure on the price and reducing the total supply of the tokens.

The Dapp Index Fund will grow continuously in a positive feedback loop, each time someone buys DIF tokens a 40% fee goes into the fund, then 10% of dividend profits from the dapps it invests in are reinvested back into the fund, and 0% of dapp tokens are ever withdrawn from the fund, and all burnt DIF reduces the supply and increases the fund size, meaning that the fund will continuously grow throughout its life and get larger and larger amounts of the dapp tokens it invests in.

## Creating the Ultimate Dividend Platform

The main goal here is to create a token that is receiving dividends and interest in many different ways, while simultaneously keeping a large amount of the supply locked up and prevented from being sold on the market. The main ways the TIT dividend pool can earn cash flow from operations of the privately owned TIT Foundation, the community, and the blockchain are from:

1. Tokenized Gaming Platforms
2. Tokenized Social Media platform
3. TIT Foundation managed crypto funds
4. TIT Foundation managed crypto insurance companies
5. Community managed companies
6. Advertising and Referral revenue
7. Being a TRON Super Representative
8. And minting new TIT tokens for stakers

Allowing the dividend pool to grow very large by only doing small and slow distributions will allow larger profits to be earned from being a Super Representative, and it will attract new money who

see consistent and large dividends being paid out by the platform. It also incentivizes people to hold longer because they're getting steady and consistent dividends, which get larger the longer you hold.

# The Roadmap

(Subject to change)

## Q4 2019

1. Release White Paper
2. Launch PRE token on TRON Network
3. Begin Marketing PRE Token Sale
4. Establish Social Channels - Twitter, Telegram, etc.
5. Appoint Community Leaders
6. Set up pre-order token sale referral program
7. Establish legal entities
8. Get initial community feedback

## Q1 2020

1. Begin PRE Token Sale
2. Setup SR rewards for PRE token holders
3. Setup TRX redemption mechanism for PRE token holders
4. Setup referral program for token sales
5. Take proceeds earned from Token Sale fees and use to fund development of TIT platform
  - a. Hire Developers
  - b. Hire Professional Marketing companies
  - c. Hire Legal counsel
  - d. Apply for gambling licenses

## Q2 2020

1. End PRE token sale
2. Begin development on TIT Platform
3. Write smart contracts for CDs and RAs
4. Write smart contracts for dividend pools

## Q3 2020

1. Develop RNG-based games

2. Build web interface and graphic design
3. Write smart contracts for Dapp Index Fund

#### Q4 2020

1. Launch TIT Platform with RNG, CDs, RAs, and DIF
2. Begin TIT token sale
3. Begin PRE for TIT 1:1 exchange
4. Begin development on Slots
5. Setup SR for TIT token holders

#### Q1 2021

1. Begin development of Table games
2. Begin development of board games
3. Begin development of LIVE games
4. Get gaming licenses

#### Q2 2021

1. Begin development of video game platforms
2. Begin development of social platform

#### Q3 2021

1. Open development up for indy developers who will launch TIT sub-tokens
2. Form partnerships and make acquisitions that will help increase the dividend pool
3. Upload all websites to the Bittorrent network to decentralize the frontend

## The TIT Foundation

Intuit Trading Inc. is a registered legal entity of the Republic of Seychelles

The TIT Foundation is wholly owned and controlled by Intuit Trading Inc.

Owning TIT tokens or its sub-tokens does NOT give equity stake in the TIT Foundation, Intuit Trading Inc., or any of its subsidiaries, and it does NOT give the right to any future work or profits earned by the TIT Foundation, Intuit Trading Inc. and any of its subsidiaries

TIT and its sub-tokens are not controlled by the TIT Foundation, and if the TIT Foundation were to cease operations the TIT smart contract and its sub-tokens would continue to operate on the blockchain.

The Fees charged for services provided by the TIT Foundation do not constitute an investment of any kind in any company or common enterprise. The TIT Foundation is not obligated to exchange one digital entry ledger for another, unless they choose to do so at their sole discretion. The TIT Foundation is free to spend their earnings from fees in whatever way they see most fit.

Any deposits into the dividend pools made by the TIT Foundation are strictly voluntary, and are made to increase the value of the TIT network, in which the TIT Foundation is the largest investor, to increase the demand for sub-token sales, in which the TIT Foundation earns fees from selling, and to earn TIT rebates. The TIT Foundation is not obligated to use their earnings from their services to develop the TIT platform, make deposits into the dividend pools, or run TRON Super Representative nodes or other software.

## **Trevor Arnold - Founder and CEO**

Trevor is a well known thought leader in the TRON and crypto communities, and has helped many people understand why TRON is the best cryptocurrency network out there. He has been speculating on cryptocurrencies for 7 years and started Intuit Consultants in 2016. He was one of the only people to call for the 2017 “alt season” and the 2019 bull run mere weeks before they began.

He has spent the last 2 years studying how dapps can be used to create new businesses and tokenize existing ones; looking closely at what economic, marketing, and game theory principles make the most successful dapps successful. TIT is the brainchild of his study of dapps and the combination of what he thinks are all the best elements from existing dapps, along with some unique ideas of his own like the

Dapp Index Fund token, Insurance company token, Retirement Accounts, Permanent Freezes, the Dividend Pool Token, and the Pre-Order Token Offer.

He draws inspiration from dapps like WINK.org, Betfury.com, HEX.win, and CITYUPTAKE.com, and from innovators like Justin Sun, Changpao Zhao (CZ), Richard Heart, Vitalik Buterin, and Satoshi Nakamoto.

If you are interested in becoming a part of the TIT Foundation please get in contact by email, Twitter, or Telegram

We are looking for Solidity developers, Java developers, Graphic designers, Android and iPhone app developers, Professional marketers and promoters, Social media Influencers, Community organizers, and Lawyers
